DETAILED ACTION

1. This Office Action is in response to communication filed 4/20/01 (paper #3). Claims 1-24 and new claims 25-28 are pending.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103© and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-28 are rejected under 35 U.S.C. 103(a) as being unpatentable over the admitted prior art (APA) in view Gish (6,233,620).

The admitted prior art teaches a method for automatically translating text with a reusable control. Comprising the steps of initializing parameters to identify...; (figure 3). It is noted that the

Art Unit: 2644

admitted prior art do not explicitly teach identifying when translation...; and encapsulating said step of initializing and identifying. However, these features are well known in the art as evidenced by Gish who teaches (see claims 2, 9) a distributed system comprising a client and a server computers where a user interface part of the execution framework is invoked and translated the user interface information into display information and in figure 23 at col. 25, lines 15-38 teaches the PE info is used to encapsulate the vent and message signatures and transform the message into a model map. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to incorporate into the prior art the invoking and the encapsulating steps as taught by Gish because it would render the overall system less complex .
